DRAFT WORKING DOCUMENTS SUBJECT TO CHANGE.
NOT FOR RELEASE TO PUBLIC, NOT TO BE QUOTED OR REFERENCED
PROPERTY OF U.S. ARMY AND MUST BE RETURNED UPON REQUEST

This document is a draft of a proposed report for U.S. Army and was prepared by IT Corporation as a basis for obtaining advance review by those having responsibilities concerning the subjects discussed in the draft. It has not been fully reviewed within the Fort McClellan BRAC Cleanup Team or other Army agencies and is, therefore, subject to revision.

Recipients of this draft must not show or release its contents under any circumstances for purposes other than official review and comment. At all times, it must be safeguarded to prevent publication or improper disclosure of the information contained herein. This draft and all copies thereof remain the property of, and must be returned on demand to, the U.S. Army Fort McClellan Transition Force, Fort McClellan, Alabama.

The Army is not responsible for nor liable for any decisions or actions the recipient, its employees or its agents make or take as a result of the use of this information.

# Data Validation Summary Report for the Site Investigation Performed at the Landfill No. 1 (Parcel FA-78) Fort McClellan, Calhoun County, Alabama

#### 1.0 Introduction

Level III data validation was performed on 100 percent of the environmental samples collected at Parcel FA-78. The analytical data consisted of one sample delivery group (SDG), CK978001, which were analyzed by Quanterra Incorporated. The chemical parameters for which the samples were analyzed are identified below:

| Parameter (Method)                              |              |
|---|--------------|
| Volatile Organic Compounds by SW-846-8260B      |              |
| Semivolatile Organic Compounds by SW-846-8270C  |              |
| Target Analyte List Metals by SW-846-6010B/7470 | <del>-</del> |
| Organochlorine Pesticides by SW-846-8081A       |              |
| Organophosphorus Pesticides by SW-8141A         |              |
| Polychlorinated Biphenyls by SW-846-8082        |              |
| Chlorinated Herbicides by SW-846-8151A          |              |
| Nitroaromatics and Nitramines by SW-846-8330    | <del></del>  |

#### 2.0 Procedure

Protection Agency (EPA) Contract Laboratory Program National Functional Guidelines For Inorganic Data Review and the 1999 EPA Contract Laboratory Program National Functional Guidelines For Organic Review for all areas except blanks. The EPA 1993 Region III Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses and 1992 Region III National Functional Guidelines for Organic Data Review were applied to the areas associated with blank contamination. Specific quality control (QC) criteria, as identified in the quality assurance plan (QAP), analytical methods, and laboratory standard operating procedures (SOP) were applied to all sample results. As the result of the use of Update III SW-846 test methods for the analytical data and the application of the Contract Laboratory Program (CLP) guidelines during the validation process, there were instances where specific QC requirements for all target compounds were not defined. This primarily occurred in the organic, gas chromatography (GC) and GC/mass spectrometry calibration areas and is due to the fact that the analytical methods are "performance-based," and allows the use of average calibration responses in lieu of individual responses, which are defined by CLP protocol. In light of applying CLP guidelines to SW-846 methods and evaluating the usability of the data during the validation

The sample data were validated following the logic identified in the 1994 U.S. Environmental

- process, specific QC criteria were determined to address all target compounds and are identified
- 2 in this report for each parameter, as well as in the validation checklists, which function as
- worksheets. All completed validation checklists are on file in the Knoxville office. For those
- 4 analytical methods not addressed by the CLP and Region III guidelines, the validation was based
- on the method requirements (i. e., SW-846, Code of Federal Regulations, SOP) and technical
- 6 judgment, following the logic of the CLP validation guidelines.

# 3.0 Summary of Data Validation Findings

- 9 The overall quality of the data was determined to be acceptable. The only rejected data ('R'
- qualified) was due to "poor performing" volatile compounds (ketones, some halogenated
- hydrocarbons, e.g.), which exhibited poor calibration responses in the associated calibration data,
- and samples that were reanalyzed and have more than one result reported. The 'R' qualifier was
- assigned to the samples with more than one set of results to indicate that a given result should not
- be used to characterize a particular constituent or an analysis for a given sample.

15

- 16 This validation report has been prepared for all the samples associated with this investigation,
- and the overall results of the validation findings are summarized in this report. A listing of the
- validation qualifiers and the reason codes, along with their definitions, is also found in
- 19 Attachment A. These qualifiers and reason codes were applied to the data and stored in the
- 20 FTMC database. The following section highlights the key findings of the data validation for
- 21 each analysis.

22

# 4.0 Analysis-Specific Data Validation Summaries

232425

# 4.1 Volatile Organic Compounds by SW-846-8260B

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 27 exceptions noted below. Data were reviewed for the following:

28

- 29 Holding Times
- 30 Technical holding time criteria were met for all project samples.

31

- 32 Initial and Continuing Calibration
- 33 All initial and continuing calibrations associated with the project samples met QC criteria, with
- 34 the exception of the following:

- 1 The following demonstrated relative response factors (RRFs) below 0.1 in the ICAL and/or
- 2 CCAL: nondetect results were rejected (qualified 'R'). Positive results were estimated
- 3 (qualified 'J') unless 'B' qualified due to blank contamination.

| SDG      | Sample Number | Compound     | Validation |
|----------|---------------|--------------|------------|
| Number   |               |              | Qualifier  |
| CK978001 | All samples   | Bromomethane | B/J/R      |

- \* 'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers assigned due to quantitation.
- \*\* 'R' qualifiers take precedence over estimating qualifiers.

The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: nondetect results were estimated (qualified 'UJ') unless rejected (qualified 'R') due to ICAL/CCAL minimum RRF criteria not met; Positive results were estimated (qualified 'J') unless 'B' qualified due to blank contamination.

| SDG     | Sample Number | Compound                            | Validation |
|---------|---------------|-------------------------------------|------------|
| Number  |               |                                     | Qualifier  |
| CK97800 | All samples   | Bromomethane, Chloroethane, Acetone | B/J/UJ/R   |
| 1       |               |                                     |            |

- \* 'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers assigned due to quantitation.
- \*\* 'R' qualifiers take precedence over estimating qualifiers.

16

17 18

19

20 21

22

- 23 The 5X rule for contaminants found in the associated equipment rinses, trip, and method blanks
- was applied to all sample results. All were found to be acceptable, with the exception of the
- 25 following:

| SDG     | Sample Number  | Compound           | Blank Contaminant | Validation |
|---------|----------------|--------------------|-------------------|------------|
| Number  |                |                    |                   | Qualifier  |
| CK97800 | All samples    | Methylene chloride | Method/ER         | В          |
| 1       |                |                    |                   |            |
| CK97800 | DD0001, DD0002 | Naphthalene        | Method            | В          |
| 1       |                |                    |                   |            |
| CK97800 | DD0002         | 2-Butanone         | ER                | В          |
| 1       |                |                    |                   |            |

| SDG     | Sample Number  | Compound | Blank Contaminant | Validation |
|---------|----------------|----------|-------------------|------------|
| Number  |                |          |                   | Qualifier  |
| CK97800 | DD0002, DD0027 | Acetone  | ER                | В          |
| 1       |                |          |                   |            |

## Surrogate Recoveries

3 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

4

## 5 Matrix Spike/Matrix Spike Duplicate

- 6 Matrix spike/matrix spike duplicate (MS/MSD) analysis was performed for the project samples
- 7 and all QC criteria were met.

8

# 9 <u>Laboratory Control Sample</u>

- Laboratory Control Sample (LCS) was performed for the project samples and all QC criteria
- 11 were met.

12

# 13 Internal Standards

14 All internal standards met QC criteria with the exception of the following:

15

| SDG     | Sample Number | Compound             | Validation |
|---------|---------------|----------------------|------------|
| Number  |               | •                    | Qualifier  |
| CK97800 | DD0001        | 4-Bromofluorobenzene | UJ/J       |
| 1       |               |                      |            |

16 17

# Field Duplicates

Original and field duplicate (FD) results were evaluated and no problems were identified.

19 20

## Quantitation

- 21 Results quantified between the maximum detection limit (MDL) and the reporting limit (RL),
- 22 which the lab qualified as 'J,' were qualified as estimated 'J' unless blank contamination was
- present or the results were rejected. Results rejected in favor of a preferred result (e.g., due to
- dilution or reanalysis) were qualified as rejected 'R'.

25

26

# 4.2 Semivolatile Organic Compounds by SW-846-8270C

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 28 exceptions noted below. Data were reviewed for the following:

# 1 Holding Times

2 Technical holding time criteria were met for all project samples.

3

- 4 <u>Initial and Continuing Calibration</u>
- 5 All initial and continuing calibrations associated with the project samples met QC criteria, with
- 6 the exception of the following:

7

- 8 The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: nondetect results
- 9 were estimated (qualified 'UJ') unless rejected (qualified 'R') due to ICAL/CCAL minimum
- 10 RRF criteria not met. Positive results were estimated (qualified 'J') unless 'B' qualified due to
- 11 blank contamination.

12

| SDG     | Sample Number   | Compound                      | Validation |
|---------|-----------------|-------------------------------|------------|
| Number  |                 |                               | Qualifier  |
| CK97800 | DD0003          | 2,4-Dinitrophenol,            | UJ         |
| 1       |                 | Hexachlorocyclopentadiene     |            |
| CK97800 | DD0001, DD0002, | Butyl benzyl phthalate, 3,3'- | UJ         |
| 1       | DD0027          | Dichlorobenzidine             |            |

13

- 14 Blanks
- 15 The 5X rule for contaminants found in the associated equipment rinses and method blanks was
- applied to all sample results. All were found to be acceptable, with the exception of the
- 17 following:

18

| SDG     | Sample Number  | Compound             | Blank Contaminant | Validation |
|---------|----------------|----------------------|-------------------|------------|
| Number  |                |                      |                   | Qualifier  |
| CK97800 | DD0001, DD0027 | bis(2-               | Method            | В          |
| 1       |                | Ethylhexyl)phthalate |                   |            |

19 20

- Surrogate Recoveries
- 21 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

22

- 23 <u>Matrix Spike/Matrix Spike Duplicate</u>
- 24 MS/MSD analysis was performed for the project samples and all QC criteria were met.

- 26 <u>Laboratory Control Sample</u>
- 27 LCS was performed for the project samples and all QC criteria were met.

- 2 Internal Standards
- 3 All internal standards met QC criteria with the exception of IS6, however, all compounds
- 4 associated with this standard were non-detect.

5

- 6 Field Duplicates
- 7 Original and FD results were evaluated and no problems were identified.

8

- 9 Quantitation
- 10 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- rejected 'R'.

14 15

# 4.3 Metals by SW-846-6010B/7471A/7470A

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 17 exceptions noted below. Data were reviewed for the following:

18

- 19 Holding Times
- 20 Technical holding time criteria were met for all samples.

21

- 22 <u>Initial and Continuing Calibrations</u>
- 23 All initial and continuing calibrations associated with the project samples met QC criteria.

24

- 25 Blanks
- 26 The 5X rule for contaminants found in the associated equipment rinse, calibration, and method
- 27 blanks was applied to all sample results. All were found to be acceptable, with the exception of
- the following:

29

| SDG     | Sample Number  | Compound | Blank Contaminant | Validation |
|---------|----------------|----------|-------------------|------------|
| Number  |                |          |                   | Qualifier  |
| CK97800 | DD0001, DD0003 | Thallium | ER                | В          |
| 1       |                |          |                   |            |

30 31

- Matrix Spike/Matrix Spike Duplicate
- 32 MS/MSD analysis was performed for the project samples and all QC criteria were met with the
- exception of the following for poor percent recoveries and/or high RPDs:

| SDG     | Sample Number | Element/Elements       | Validation |
|---------|---------------|------------------------|------------|
| Number  |               |                        | Qualifier  |
| CK97800 | All samples   | Antimony, Calcium,     | UJ/J       |
| 1       |               | Chromium, Copper, Lead |            |

3

## Laboratory Control Sample

LCS was performed for the project samples and all QC criteria were met.

4 5

6

# Interference Check Sample

All interference check sample (ICS) percent recoveries were acceptable. All QC criteria were met.

7 8 9

# **Inductively Coupled Plasma Serial Dilutions**

All QC criteria were met for the serial dilutions associated with the project samples.

10 11

## 12 Field Duplicates

Original and FD results were evaluated and all QC criteria were met.

14 15

### Quantitation

Results quantitated between the instrument detection limit (IDL) and the RL ('B' flagged by the laboratory) were qualified as estimated ('J').

18 19

# 4.4 Organochlorine Pesticides by SW-846-8081A

- Overall, the data are of good quality and are usable as reported by the laboratory with the exceptions
- 21 noted below. Data were reviewed for the following:

22

# 23 Holding Times

24 Technical holding time criteria were met for all project samples.

25

# 26 <u>Initial and Continuing Calibration</u>

27 All initial and continuing calibrations associated with the project samples met QC criteria.

28

#### 29 Blanks

- The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

32

#### 33 Surrogate Recoveries

34 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

- 1 Matrix Spike/Matrix Spike Duplicate
- 2 MS/MSD analysis was performed for the project samples and all QC criteria were met.

- 4 <u>Laboratory Control Sample</u>
- 5 LCS was performed for the project samples and all QC criteria were met.

6

- 7 Field Duplicates
- 8 Original and FD results were evaluated and no problems were identified.

9

- 10 Quantitation
- 11 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 14 rejected 'R'.

15 16

- 4.5 Organophosphorus Pesticides by SW-846-8141A
- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 18 exceptions noted below. Data were reviewed for the following:

19

- 20 Holding Times
- 21 Technical holding time criteria were met for all project samples.

22

- 23 Initial and Continuing Calibration
- 24 All initial and continuing calibrations associated with the project samples met QC criteria.

25

- 26 Blanks
- 27 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

29

- 30 Surrogate Recoveries
- All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

32

- 33 <u>Matrix Spike/Matrix Spike Duplicate</u>
- 34 MS/MSD analysis was performed for the project samples and all OC criteria were met.

- 1 <u>Laboratory Control Sample</u>
- 2 LCS was performed for the project samples and all QC criteria were met.

34 Field Duplicates

5 Original and FD results were evaluated and no problems were identified.

67 Quantitation

- 8 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 9 estimated 'J' unless blank contamination was present or the results were rejected. Results
- 10 rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 11 rejected 'R.'

12

# 4.6 PCBs by SW 846-8082

13 14

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- exceptions noted below. Data were reviewed for the following:

17

- 18 Holding Times
- 19 Technical holding time criteria were met for all project samples.

20

- 21 <u>Initial and Continuing Calibration</u>
- 22 All initial and continuing calibrations associated with the project samples met QC criteria.

23

- 24 Blanks
- 25 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

27

- 28 Surrogate Recoveries
- 29 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

30

- 31 <u>Matrix Spike/Matrix Spike Duplicate</u>
- 32 MS/MSD analysis was performed for the project samples and all QC criteria were met.

33

- 34 <u>Laboratory Control Sample</u>
- 35 LCS was performed for the project samples and all QC criteria were met.

- 1 Field Duplicates
- 2 Original and FD results were evaluated and no problems were identified.

4 Quantitation

- 5 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 6 estimated 'J' unless blank contamination was present or the results were rejected. Results
- 7 rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 8 rejected 'R'.

9 10

3

# 4.7 Herbicides by SW-846-8151

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- exceptions noted below. Data were reviewed for the following:

13

# 14 Holding Times

15 Technical holding time criteria were met for all project samples.

16

# 17 <u>Initial and Continuing Calibration</u>

All initial and continuing calibrations associated with the project samples met QC criteria.

19

- 20 Blanks
- The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- 22 applied to all sample results. All were found to be acceptable.

23

# 24 Surrogate Recoveries

25 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

26

- 27 <u>Matrix Spike/Matrix Spike Duplicate</u>
- 28 MS/MSD analysis was performed for the project samples and all QC criteria were met.

29

# 30 <u>Laboratory Control Sample</u>

LCS was performed for the project samples and all QC criteria were met.

32

# 33 Field Duplicates

Original and FD results were evaluated and no problems were identified.

- 1 Quantitation
- 2 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 3 estimated 'J' unless blank contamination was present or the results were rejected. Results
- 4 rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 5 rejected 'R'.

- 4.8 Nitroaromatics and Nitramines by SW-846-8330
- 8 Overall, the data are of good quality and are usable as reported by the laboratory with the
- 9 exceptions noted below. Data were reviewed for the following:

10

- 11 Holding Times
- 12 Technical holding time criteria were met for all project samples.

13

- 14 Initial and Continuing Calibration
- 15 All initial and continuing calibrations associated with the project samples met QC criteria.

16

- 17 Blanks
- 18 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

20

- 21 Surrogate Recoveries
- 22 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

23

- 24 Matrix Spike/Matrix Spike Duplicate
- 25 MS/MSD analysis was performed for the project samples and all QC criteria were met.

26

- 27 <u>Laboratory Control Sample</u>
- 28 LCS was performed for the project samples and all OC criteria were met.

29

- 30 Field Duplicates
- Original and FD results were evaluated and no problems were identified.

- 33 Quantitation
- Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- estimated 'J' unless blank contamination was present or the results were rejected. Results

- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 2 rejected 'R'.

# **ATTACHMENT A**

### **Validation Qualifiers**

- U Not detected. The compound/analyte was analyzed for, but not detected above the associated reporting limit.
- J The compound/analyte was positively identified; the reported value is the estimated concentration of the constituent detected in the sample analyzed.
- B The concentration reported was detected significantly above the levels reported in the associated equipment rinse samples and/or laboratory method and trip blanks. (5X/10X Rule was applied).
- R The reported sample results are rejected due to the following:
  - 1. Severe deficiencies in the supporting quality control data.
  - 2. Anomalies noted in the sampling and/or analysis process which could affect the validity of the reported data.
  - 3. The presence or absence of the constituent cannot be verified based on the data provided.
  - 4. To indicate not to use a particular result in the event of a reanalysis.
- UJ The compound/analyte was analyzed for, but not detected above the established reporting limit. However, review and evaluation of supporting QC data and/or sampling and analysis process have indicated that the 'non-detect' maybe inaccurate or imprecise. The non-detect result should be estimated.

# Data Validation Summary Report for the Site Investigation Performed at the "Landfill No. 2" (Parcel FA-79) Fort McClellan, Calhoun County, Alabama

4 5

6

7

8

1

2

3

#### 1.0 Introduction

Level III data validation was performed on 100 percent of the environmental samples collected at

Parcel FA-79. The analytical data consisted of one sample delivery group (SDG), CK979001,

which was analyzed by Quanterra Incorporated. The chemical parameters for which the samples

were analyzed are identified below:

11

10

| Parameter (Method)                                     |
|--|
| Volatile Organic Compounds by SW-846-8260B             |
| Semivolatile Organic Compounds by SW-846-8270C         |
| Target Analyte List Metals by SW-846-6010B/7470A/7471A |
| Organochlorine Pesticides by SW-846-8081A              |
| Organophosphorus Pesticides by SW-8141A                |
| Polychlorinated Biphenyls by SW-846-8082               |
| Chlorinated Herbicides by SW-846-8151A                 |
| Nitroaromatics and Nitramines by SW-846-8330           |

12 13

#### 2.0 Procedure

- 14 The sample data were validated following the logic identified in the 1994 U.S. Environmental
- 15 Protection Agency (EPA) Contract Laboratory Program National Functional Guidelines For
- 16 Inorganic Data Review and the 1999 EPA Contract Laboratory Program National Functional
- 17 Guidelines For Organic Review for all areas except blanks. The EPA 1993 Region III
- 18 Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses and 1992
- 19 Region III National Functional Guidelines for Organic Data Review were applied to the areas
- 20 associated with blank contamination. Specific quality control (QC) criteria, as identified in the
- quality assurance plan (QAP), analytical methods, and laboratory standard operating procedures
- 22 (SOP) were applied to all sample results. As the result of the use of Update III SW-846 test
- 23 methods for the analytical data and the application of the Contract Laboratory Program (CLP)
- 24 guidelines during the validation process, there were instances where specific QC requirements
- 25 for all target compounds were not defined. This primarily occurred in the organic, gas
- 26 chromatography (GC) and GC/mass spectrometry calibration areas and is due to the fact that the

- analytical methods are "performance-based," and allows the use of average calibration responses
- 2 in lieu of individual responses, which are defined by CLP protocol. In light of applying CLP
- 3 guidelines to SW-846 methods and evaluating the usability of the data during the validation
- 4 process, specific QC criteria were determined to address all target compounds and are identified
- 5 in this report for each parameter, as well as in the validation checklists, which function as
- 6 worksheets. All completed validation checklists are on file in the Knoxville office. For those
- analytical methods not addressed by the CLP and Region III guidelines, the validation was based
- on the method requirements (i. e., SW-846, Code of Federal Regulations, SOP) and technical
- 9 judgment, following the logic of the CLP validation guidelines.

# 3.0 Summary of Data Validation Findings

- 12 The overall quality of the data was determined to be acceptable. The only rejected data
- 13 ('R'qualified) was due to "poor performing" volatile compounds (ketones, some halogenated
- hydrocarbons, e.g.), which exhibited poor calibration responses in the associated calibration data,
- and samples that were reanalyzed and have more than one result reported. The R qualifier was
- assigned to the samples with more than one set of results to indicate that a given result should not
- be used to characterize a particular constituent or an analysis for a given sample.

18

- 19 This validation report has been prepared for all the samples associated with this investigation,
- and the overall results of the validation findings are summarized in this report. A listing of the
- validation qualifiers and the reason codes, along with their definitions, is also found in
- 22 Attachment A. These qualifiers and reason codes were applied to the data and stored in the
- 23 FTMC database. The following section highlights the key findings of the data validation for
- each analysis.

2526

## 4.0 Analysis-Specific Data Validation Summaries

27 28

# 4.1 Volatile Organic Compounds by SW-846-8260B

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 30 exceptions noted below. Data were reviewed for the following:

- 1 Holding Times
- 2 Technical holding time criteria were met for all project samples.

- 4 Initial and Continuing Calibration
- 5 All initial and continuing calibrations associated with the project samples met QC criteria, with
- 6 the exception of the following:

7

8

9

• The following demonstrated relative response factors (RRFs) below 0.1 in the ICAL and/or CCAL: nondetect results were rejected (qualified 'R'). Positive results were estimated (qualified 'J'), unless 'B' qualified due to blank contamination.

10 11

| SDG      | Sample Number  | Compound     | Validation |
|----------|----------------|--------------|------------|
| Number   |                |              | Qualifier  |
| CK979001 | DD0004, DD0005 | Bromomethane | *R         |

12

'R' qualifiers take precedence over estimating qualifiers.

13 14 15

16

17

• The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: nondetect results were estimated (qualified 'UJ') unless rejected (qualified 'R') due to ICAL/CCAL minimum RRF criteria not met. Positive results were estimated (qualified 'J') unless 'B' qualified due to blank contamination.

18 19

| SDG      | Sample Number  | Compound                            | Validation |
|----------|----------------|-------------------------------------|------------|
| Number   |                |                                     | Qualifier  |
| CK979001 | DD0004, DD0005 | Bromomethane, Chloroethane, Acetone | **R/UJ/*B  |

20 21 22

\* 'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers assigned due to quantitation.

23 24

'R' qualifiers take precedence over estimating qualifiers.

2526

- Blanks
- 27 The 5X/10X rule for contaminants found in the associated equipment rinses, trip, and method
- 28 blanks was applied to all sample results. All were found to be acceptable, with the exception of
- 29 the following:

30

υ

| SDG      | Sample Number  | Compound                                    | Blank Contaminant | Validation |
|----------|----------------|---|-------------------|------------|
| Number   |                |   |                   | Qualifier  |
| CK979001 | DD0004, DD0005 | Methylene chloride,<br>Naphthalene, Acetone | Method/ER         | В          |

#### 2 Surrogate Recoveries

3 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

4

# 5 <u>Matrix Spike/Matrix Spike Duplicate</u>

- 6 Matrix spike/matrix spike duplicate (MS/MSD) analysis was performed for the project samples,
- 7 and all QC criteria were met.

8 9

## <u>Laboratory Control Sample</u>

- 10 Laboratory control sample (LCS) was performed for the project samples, and all QC criteria were
- 11 met.

12

13

## Internal Standards

- 14 All internal standards met QC criteria with the following exceptions. Compounds associated
- with the IS were qualified as applicable.

16

| SDG      | Sample Number  | Internal Standard      | Validation |
|----------|----------------|------------------------|------------|
| Number   |                |                        | Qualifier  |
| CK979001 | DD0004, DD0005 | 1,4-Dichlorobenzene-d4 | UJ/*B      |

17 18

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers assigned due to quantitation.

19 20 21

### Field Duplicates

Original and field duplicate results were evaluated and no problems were identified.

23

## 24 Quantitation

- 25 Results quantified between the maximum detection limit (MDL) and the reporting limit (RL),
- 26 which the lab qualified as "J," were qualified as estimated 'J' unless blank contamination was
- 27 present or the results were rejected. Results rejected in favor of a preferred result (e.g., due to
- dilution or reanalysis) were qualified as rejected 'R'.

# 4.2 Semivolatile Organic Compounds by SW-846-8270C

- 3 Overall, the data are of good quality and are usable as reported by the laboratory with the
- 4 exceptions noted below. Data were reviewed for the following:

5

2

- 6 Holding Times
- 7 Technical holding time criteria were met for all project samples.

8

- 9 <u>Initial and Continuing Calibration</u>
- All initial and continuing calibrations associated with the project samples met QC criteria, with the exception of the following:

12 13

14

15

• The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: nondetect results were estimated (qualified 'UJ'), unless rejected (qualified 'R') due to ICAL/CCAL minimum RRF criteria not met. Positive results were estimated (qualified 'J') unless 'B' qualified due to blank contamination.

16 17

| SDG<br>Number | Sample Number | Compound                                       | Validation<br>Qualifier |
|---------------|---------------|--|-------------------------|
| CK979001      | DD0004        | 3,3'-Dichlorobenzidine, Butyl Benzyl Phthalate | UJ                      |
| CK979001      | DD0005        | 2,4-Dinitrophenol, Hexachlorocyclopentadiene   | UJ                      |

18 19

- Blanks
- 20 The 5X/10X rule for contaminants found in the associated equipment rinses and method blanks
- 21 was applied to all sample results. All were found to be acceptable, with the exception of the
- 22 following:

23

| SDG      | Sample Number  | Compound             | Blank Contaminant | Validation |
|----------|----------------|----------------------|-------------------|------------|
| Number   |                |                      |                   | Qualifier  |
| CK979001 | DD0004, DD0005 | bis(2-               | Method            | В          |
|          |                | Ethylhexyl)phthalate |                   |            |

## 1 Surrogate Recoveries

2 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

3

# 4 Matrix Spike/Matrix Spike Duplicate

5 MS/MSD analysis was performed for the project samples and all QC criteria were met.

6

## 7 <u>Laboratory Control Sample</u>

8 LCS was performed for the project samples and all QC criteria were met.

9

# 10 Internal Standards

11 All internal standards met QC criteria.

12

## 13 Field Duplicates

Original and field duplicate results were evaluated. All QC criteria were met with the following exceptions for which RPD > 50 percent:

16

| SDG      | Sample Number            | Compound                              | Validation |
|----------|--------------------------|---------------------------------------|------------|
| Number   |                          |                                       | Qualifier  |
| CK979001 | DD0004 (original) DD0005 | Indeno(1,2,3-CD)Pyrene, Fluoranthene, | J          |
|          | (FD)                     | Benzo(K)Fluoranthene,                 |            |
|          |                          | Benzo(B)Fluoranthene                  |            |

17 18

#### Quantitation

- 19 Results quantified between the MDL and the RL, which the lab qualified as "J," were qualified
- 20 as estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 22 rejected 'R'.

2324

# 4.3 Metals by SW-846-6010B/7471A/7470A

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 26 exceptions noted below. Data were reviewed for the following:

2728

# **Holding Times**

29 Technical holding time criteria were met for all samples.

- 1 <u>Initial and Continuing Calibrations</u>
- 2 All initial and continuing calibrations associated with the project samples met QC criteria.

4 Blanks

- 5 The 5X rule for contaminants found in the associated equipment rinse, calibration, and method
- 6 blanks was applied to all sample results. All were found to be acceptable.

7

3

- 8 Matrix Spike/Matrix Spike Duplicate
- 9 MS/MSD analysis was performed for the project samples and all QC criteria were met.

10

- 11 <u>Laboratory Control Sample</u>
- 12 LCS was performed for the project samples and all QC criteria were met.

13

- 14 <u>Interference Check Sample</u>
- 15 All ICS percent recoveries were acceptable. All QC criteria were met.

16

- 17 Inductively Coupled Plasma Serial Dilutions
- All QC criteria were met for the serial dilutions associated with the project samples.

19

- 20 Field Duplicates
- Original and FD results were evaluated. All QC criteria were met with the following exceptions
- for which RPD > 50 percent:

23

| SDG      | Sample Number                 | Compound     | Validation |
|----------|-------------------------------|--------------|------------|
| Number   |                               |              | Qualifier  |
| CK979001 | DD0004 (original) DD0005 (FD) | Silver, Zinc | J          |

- 25 Quantitation
- Results quantitated between the instrument detection limit and the RL ('B' flagged by the
- 27 laboratory) were qualified as estimated (J).

| 1  |  |
|----|--|
| 2  | 4.4 Organochlorine Pesticides by SW-846-8081A  |
| 3  | Overall, the data are of good quality and are usable as reported by the laboratory. Data were    |
| 4  | reviewed for the following:  |
| 5  |  |
| 6  | Holding Times  |
| 7  | Technical holding time criteria were met for all project samples.                                |
| 8  |  |
| 9  | Initial and Continuing Calibration   |
| 10 | All initial and continuing calibrations associated with the project samples met QC criteria.     |
| 11 |  |
| 12 | <u>Blanks</u>  |
| 13 | The 5X rule for contaminants found in the associated equipment rinse and method blanks was       |
| 14 | applied to all sample results. All were found to be acceptable.                                  |
| 15 |  |
| 16 | Surrogate Recoveries   |
| 17 | All surrogate recoveries are within acceptable QC ranges for the surrogates applied.             |
| 18 |  |
| 19 | Matrix Spike/Matrix Spike Duplicate  |
| 20 | MS/MSD analysis was performed for the project samples and all QC criteria were met.              |
| 21 |  |
| 22 | Laboratory Control Sample  |
| 23 | LCS was performed for the project samples and all QC criteria were met.                          |
| 24 |  |
| 25 | Field Duplicates   |
| 26 | Original and FD results were evaluated and no problems were identified.                          |
| 27 |  |
| 28 | Quantitation   |
| 29 | Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as |
| 30 | estimated 'J' unless blank contamination was present or the results were rejected. Results       |
| 31 | rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as  |
| 32 | rejected 'R'.  |

- 4.5 Organophosphorus Pesticides by SW-846-8141A
- 2 Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 3 reviewed for the following:

1

- 5 Holding Times
- 6 Technical holding time criteria were met for all project samples.

7

- 8 <u>Initial and Continuing Calibration</u>
- 9 All initial and continuing calibrations associated with the project samples met QC criteria.

10

- 11 Blanks
- 12 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

14

- 15 Surrogate Recoveries
- 16 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

17

- 18 Matrix Spike/Matrix Spike Duplicate
- 19 MS/MSD analysis was performed for the project samples and all QC criteria were met.

20

- 21 <u>Laboratory Control Sample</u>
- 22 LCS was performed for the project samples and all QC criteria were met.

23

- 24 Field Duplicates
- Original and FD results were evaluated and no problems were identified.

26

- 27 Quantitation
- 28 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 29 estimated 'J' unless blank contamination was present or the results were rejected. Results
- 30 rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- rejected 'R'.

# 1 4.6 Polychlorinated Biphenyls by SW-846-8082

- 2 Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 3 reviewed for the following:

5 Holding Times

4

7

10

14

17

20

23

26

6 Technical holding time criteria were met for all project samples.

8 Initial and Continuing Calibration

9 All initial and continuing calibrations associated with the project samples met OC criteria.

11 Blanks

- 12 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

15 Surrogate Recoveries

All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

18 Matrix Spike/Matrix Spike Duplicate

19 MS/MSD analysis was performed for the project samples and all QC criteria were met.

21 <u>Laboratory Control Sample</u>

22 LCS was performed for the project samples and all QC criteria were met.

24 <u>Field Duplicates</u>

Original and FD results were evaluated and no problems were identified.

27 Quantitation

- 28 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 29 estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- rejected 'R'.

## 1 4.7 Herbicides by SW-846-8151

- 2 Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 3 reviewed for the following:

4

- 5 Holding Times
- 6 Technical holding time criteria were met for all project samples.

7

- 8 Initial and Continuing Calibration
- 9 All initial and continuing calibrations associated with the project samples met QC criteria.

10

- 11 Blanks
- The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

14

- 15 Surrogate Recoveries
- All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

17

- 18 <u>Matrix Spike/Matrix Spike Duplicate</u>
- 19 MS/MSD analysis was performed for the project samples and all QC criteria were met.

20

- 21 <u>Laboratory Control Sample</u>
- 22 LCS was performed for the project samples and all QC criteria were met.

23

- 24 Field Duplicates
- 25 Original and FD results were evaluated and no problems were identified.

26

- 27 Quantitation
- 28 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 29 estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 31 rejected 'R'.

# 4.8 Nitroaromatics and Nitramines by SW-846-8330

- 2 Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 3 reviewed for the following:

5 Holding Times

1

4

7

10

14

17

20

23

26

6 Technical holding time criteria were met for all project samples.

8 Initial and Continuing Calibration

9 All initial and continuing calibrations associated with the project samples met QC criteria.

11 Blanks

- 12 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

15 Surrogate Recoveries

All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

18 <u>Matrix Spike/Matrix Spike Duplicate</u>

19 MS/MSD analysis was performed for the project samples and all QC criteria were met.

21 <u>Laboratory Control Sample</u>

22 LCS was performed for the project samples and all QC criteria were met.

24 Field Duplicates

Original and FD results were evaluated and no problems were identified.

27 Quantitation

- 28 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 29 estimated 'J' unless blank contamination was present or the results were rejected. Results
- 30 rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- rejected 'R'.

#### Validation Qualifiers

- U Not detected. The compound/analyte was analyzed for, but not detected above the associated reporting limit.
- J The compound/analyte was positively identified; the reported value is the estimated concentration of the constituent detected in the sample analyzed.
- B The concentration reported was detected significantly above the levels reported in the associated equipment rinse samples and/or laboratory method and trip blanks. (5X/10X Rule was applied).
- R The reported sample results are rejected due to the following:
  - 1. Severe deficiencies in the supporting quality control data.
  - 2. Anomalies noted in the sampling and/or analysis process which could affect the validity of the reported data.
  - 3. The presence or absence of the constituent cannot be verified based on the data provided.
  - 4. To indicate not to use a particular result in the event of a reanalysis.
- UJ The compound/analyte was analyzed for, but not detected above the established reporting limit. However, review and evaluation of supporting QC data and/or sampling and analysis process have indicated that the 'non-detect' maybe inaccurate or imprecise. The non-detect result should be estimated.

# **Validation Reason Code Definitions**

(Page 1 of 2)

| Reason Code | Description   |
|-------------|---|
| 01          | Sample received outside of 4+/-2 degrees Celsius            |

## Data Validation Summary Report for the Site Investigation Performed at the "Landfill No. 3" (Parcel FA-80) Fort McClellan, Calhoun County, Alabama

<del>4</del> 

1 2

#### 1.0 Introduction

Level III data validation was performed on 100 percent of the environmental samples collected at Parcel FA-80. The analytical data consisted of one sample delivery group (SDG), CK980001, which was analyzed by Quanterra Incorporated. The chemical parameters for which the samples were analyzed are identified below:

| Parameter (Method)                                     |
|--|
| Volatile Organic Compounds by SW-846-8260B             |
| Semivolatile Organic Compounds by SW-846-8270C         |
| Target Analyte List Metals by SW-846-6010B/7470A/7471A |
| Organochlorine Pesticides by SW-846-8081A              |
| Organophosphorus Pesticides by SW-8141A                |
| Polychlorinated Biphenyls by SW-846-8082               |
| Chlorinated Herbicides by SW-846-8151A                 |
| Nitroaromatics and Nitramines by SW-846-8330           |

#### 2.0 Procedures

The sample data were validated following the logic identified in the 1994 U.S. Environmental Protection Agency (EPA) Contract Laboratory Program National Functional Guidelines For Inorganic Data Review and the 1999 EPA Contract Laboratory Program National Functional Guidelines For Organic Review for all areas except blanks. The EPA 1993 Region III Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses and 1992 Region III National Functional Guidelines for Organic Data Review were applied to the areas associated with blank contamination. Specific quality control (QC) criteria, as identified in the quality assurance plan (QAP), analytical methods, and laboratory standard operating procedures (SOP) were applied to all sample results. As the result of the use of Update III SW-846 test methods for the analytical data and the application of the Contract Laboratory Program (CLP) guidelines during the validation process, there were instances where specific QC requirements for all target compounds were not defined. This primarily occurred in the organic, gas chromatography (GC) and GC/mass spectrometry calibration areas and is due to the fact that the analytical methods are "performance-based," and allows the use of average calibration responses in lieu of individual responses, which are defined by CLP protocol. In light of applying CLP

- guidelines to SW-846 methods and evaluating the usability of the data during the validation
- 2 process, specific QC criteria were determined to address all target compounds and are identified
- 3 in this report for each parameter, as well as in the validation checklists, which function as
- 4 worksheets. All completed validation checklists are on file in the Knoxville office. For those
- 5 analytical methods not addressed by the CLP and Region III guidelines, the validation was based
- on the method requirements (i.e., SW-846, Code of Federal Regulations, SOP) and technical
- 7 judgment, following the logic of the CLP validation guidelines.

## 3.0 Summary of Data Validation Findings

- The overall quality of the data was determined to be acceptable. The only rejected data ('R'
- qualified) were due to "poor performing" volatile compounds (ketones, some halogenated
- hydrocarbons, e.g.), which exhibited poor calibration responses in the associated calibration data,
- and samples that were reanalyzed and have more than one result reported. The 'R' qualifier was
- assigned to the samples with more than one set of results to indicate that a given result should not
- be used to characterize a particular constituent or an analysis for a given sample.

16

- 17 This validation report has been prepared for all the samples associated with this investigation,
- and the overall results of the validation findings are summarized in this report. A listing of the
- validation qualifiers and the reason codes, along with their definitions, is also found in
- 20 Attachment A. These qualifiers and reason codes were applied to the data and stored in the
- 21 FTMC database. The following section highlights the key findings of the data validation for
- each analysis.

2324

### 4.0 Analysis-Specific Data Validation Summaries

2526

## 4.1 Volatile Organic Compounds by SW-846-8260B

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 28 exceptions noted below. Data were reviewed for the following:

29

- 30 Holding Times
- 31 Technical holding time criteria were met for all project samples.

- 33 Initial and Continuing Calibration
- All initial and continuing calibrations associated with the project samples met QC criteria, with
- 35 the exception of the following:

3 CCAL: nondetect results were rejected (qualified 'R'). Positive results were estimated

4 (qualified 'J') unless 'B' qualified due to blank contamination.

| SDG      | Sample Number                   | Compound     | Validation |
|----------|---------------------------------|--------------|------------|
| Number   |                                 |              | Qualifier  |
| CK980001 | DD0007, DD0008, DD0009, DD0010, | Bromomethane | R          |
|          | DD0011                          |              |            |

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers assigned due to quantitation.

\*\* 'R' qualifiers take precedence over estimating qualifiers.

 The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: nondetect results were estimated (qualified 'UJ') unless rejected (qualified 'R') due to ICAL/CCAL minimum RRF criteria not met. Positive results were estimated (qualified 'J') unless 'B' qualified due to blank contamination.

| SDG      | Sample Number           | Compound                | Validation |
|----------|-------------------------|-------------------------|------------|
| Number   |                         | ;                       | Qualifier  |
| CK980001 | DD0007, DD0008, DD0009  | 2-Butanone, 2-Hexanone, | UJ/B       |
|          |                         | Methylene Chloride      |            |
| CK980001 | DD0010, DD0011          | Chloroethane            | UJ         |
| CK980001 | DD0007, DD0008, DD0009, | Bromomethane, Acetone   | R//B       |
|          | DD0010, DD0011          |                         |            |

\* 'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, takes precedence over estimating qualifiers assigned due to quantitation.

\*\* 'R' qualifiers take precedence over estimating qualifiers.

#### Blanks

The 5X/10X rule for contaminants found in the associated equipment rinses, trip, and method

25 blanks was applied to all sample results. All were found to be acceptable, with the exception of

the following:

| SDG      | Sample Number           | Compound    | Blank       | Validation |
|----------|-------------------------|-------------|-------------|------------|
| Number   |                         |             | Contaminant | Qualifier  |
| CK980001 | DD0007, DD0008, DD0009, | Methylene   | Method/ER   | В          |
|          | DD0010, DD0011          | Chloride    |             |            |
| CK980001 | DD0007, DD0009, DD0010, | Acetone     | ER          | В          |
|          | DD0011                  |             | Į           |            |
| CK980001 | DD0010                  | Naphthalene | Method      | В          |

### Surrogate Recoveries

3 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

4 5

## Matrix Spike/Matrix Spike Duplicate

- 6 Matrix spike/matrix spike duplicate (MS/MSD) analysis was performed for the project samples
- 7 and all QC criteria were met.

8

## Laboratory Control Sample

- 10 Laboratory Control Sample (LCS) was performed for the project samples and all QC criteria
- 11 were met.

12 13

### Internal Standards

14 All internal standards met QC criteria.

15 16

#### Field Duplicates

Original and field duplicate (FD) results were evaluated and no problems were identified.

18

#### 19 Quantitation

- 20 Results quantified between the maximum detection limit (MDL) and the reporting limit (RL),
- 21 which the lab qualified as 'J,' were qualified as estimated 'J' unless blank contamination was
- 22 present or the results were rejected. Results rejected in favor of a preferred result (e.g., due to
- 23 dilution or reanalysis) were qualified as rejected 'R'.

2425

## 4.2 Semivolatile Organic Compounds by SW-846-8270C

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 27 exceptions noted below. Data were reviewed for the following:

- 1 Holding Times
- 2 Technical holding time criteria were met for all project samples.

- 4 <u>Initial and Continuing Calibration</u>
- 5 All initial and continuing calibrations associated with the project samples met QC criteria, with
- 6 the exception of the following:

7

- 8 The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: nondetect results
- 9 were estimated (qualified 'UJ') unless rejected (qualified 'R') due to ICAL/CCAL minimum
- 10 RRF criteria not met. Positive results were estimated (qualified 'J') unless 'B' qualified due to
- 11 blank contamination.

12

| SDG      | Sample Number   | Compound                   | Validation |
|----------|-----------------|----------------------------|------------|
| Number   |                 |                            | Qualifier  |
| CK980001 | DD0007, DD0008, | 2,4-Dinitrophenol,         | UJ         |
|          | DD0009, DD0010, | Hexachlorocyclopentadiene  |            |
|          | DD0011          |                            |            |
| CK980001 | DD0007, DD0008, | 4,6-Dinitro-2-Methylphenol | UJ         |
|          | DD0009          |                            |            |

13 14

- Blanks
- 15 The 5X/10X rule for contaminants found in the associated equipment rinses and method blanks
- was applied to all sample results. All were found to be acceptable, with the exception of the
- 17 following:

18

| SDG      | Sample Number | Compound             | Blank Contaminant | Validation |
|----------|---------------|----------------------|-------------------|------------|
| Number   |               |                      |                   | Qualifier  |
| CK980001 | DD0008        | bis(2-               | Method            | В          |
|          |               | Ethylhexyl)phthalate |                   |            |

19

- 20 Surrogate Recoveries
- 21 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

22

- 23 <u>Matrix Spike/Matrix Spike Duplicate</u>
- 24 MS/MSD analysis was performed for the project samples and all QC criteria were met.

- 1 <u>Laboratory Control Sample</u>
- 2 LCS was performed for the project samples and all QC criteria were met.

- 4 Internal Standards
- 5 All internal standards met QC criteria.

6

- 7 Field Duplicates
- 8 Original and FD results were evaluated and all QC criteria were met.

9

- 10 Quantitation
- 11 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 14 rejected 'R'.

15

16

## 4.3 Metals by SW-846-6010B/7471A/7470A

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 18 exceptions noted below. Data were reviewed for the following:

19

- 20 Holding Times
- 21 Technical holding time criteria were met for all samples.

22

- 23 Initial and Continuing Calibrations
- 24 All initial and continuing calibrations associated with the project samples met QC criteria.

25

- 26 Blanks
- 27 The 5X rule for contaminants found in the associated equipment rinse, calibration, and method
- blanks was applied to all sample results. All were found to be acceptable with the exception of
- 29 the following:

30

| SDG      | Sample Number | Compound | Blank Contaminant | Validation |
|----------|---------------|----------|-------------------|------------|
| Number   |               |          |                   | Qualifier  |
| CK980001 | DD0008        | Mercury  | Method            | В          |
| CK980001 | DD0010        | Thallium | ER                | В          |

- Matrix Spike/Matrix Spike Duplicate 1
- MS/MSD analysis was performed for the project samples and all QC criteria were met with the 2
- 3 exception of the following:

5 6

7

8

9

11

14

18

30

| SDG      | Sample Number           | Compound                       |  |
|----------|-------------------------|--------------------------------|--|
| Number   |                         |                                |  |
| CK980001 | DD0007, DD0008, DD0009, | Mercury, Chromium, Lead, Zinc, |  |
|          | DD0010, DD0011          | Antimony, Manganese            |  |

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers assigned due to quantitation.

Validation Qualifier B/J/UJ

Laboratory Control Sample

LCS was performed for the project samples and all OC criteria were met. 10

Interference Check Sample 12

All interference check sample (ICS) % recoveries were acceptable. All QC criteria were met. 13

Inductively Coupled Plasma Serial Dilutions 15

All QC criteria were met for the serial dilutions associated with the project samples with the 16

17 exception of the following:

| SDG      | Sample Number                          | Compound  | Validation |
|----------|--|-----------|------------|
| Number   | •                                      |           | Qualifier  |
| CK980001 | DD0007, DD0008, DD0009, DD0010, DD0011 | Potassium | J          |

Field Duplicates 20

21 Original and FD results were evaluated and all OC criteria were met.

Quantitation 23

- Results quantitated between the instrument detection limit (IDL) and the RL ('B' flagged by the 24
- 25 laboratory) were qualified as estimated ('J').

4.4 Organochlorine Pesticides by SW-846-8081A

- Overall, the data are of good quality and are usable as reported by the laboratory with the 28
- exceptions noted below. Data were reviewed for the following: 29

- 1 Holding Times
- 2 Technical holding time criteria were met for all project samples.

- 4 <u>Initial and Continuing Calibration</u>
- 5 All initial and continuing calibrations associated with the project samples met QC criteria.

6

- 7 Blanks
- 8 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- 9 applied to all sample results. All were found to be acceptable.

10

- 11 Surrogate Recoveries
- 12 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

13

- 14 Matrix Spike/Matrix Spike Duplicate
- 15 MS/MSD analysis was performed for the project samples and all QC criteria were met.

16

- 17 Laboratory Control Sample
- 18 LCS was performed for the project samples and all QC criteria were met.

19

- 20 Field Duplicates
- Original and FD results were evaluated and no problems were identified.

22

- 23 Confirmation
- The second column confirmation analysis %D > 25 percent was exceeded for the following:

25

| SDG      | Sample Number     | Compound   | Validation |
|----------|-------------------|--|------------|
| Number   |                   |  | Qualifier  |
| CK980001 | DD0011            | Heptachlor, Beta-BHC, Heptachlor Epoxide,<br>Endosulfan II | J          |
| CK980001 | DD0009,<br>DD0011 | 4,4'-DDE   | J          |

- 27 Quantitation
- 28 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 29 estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as

- rejected 'R'. It should be noted that Chlordane (Technical) results for samples DD0008,
- 2 DD0009, and DD0011, were estimated (qualified 'J'), due to altered pattern.

## 4.5 Organophosphorus Pesticides by SW-846-8141A

- 5 Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 6 reviewed for the following:

7

- 8 Holding Times
- 9 Technical holding time criteria were met for all project samples.

10

- 11 <u>Initial and Continuing Calibration</u>
- 12 All initial and continuing calibrations associated with the project samples met QC criteria.

13

- 14 Blanks
- 15 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

17

- 18 Surrogate Recoveries
- 19 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

20

- 21 <u>Matrix Spike/Matrix Spike Duplicate</u>
- 22 MS/MSD analysis was performed for the project samples and all QC criteria were met.

23

- 24 <u>Laboratory Control Sample</u>
- 25 LCS was performed for the project samples and all QC criteria were met.

26

- 27 Field Duplicates
- Original and FD results were evaluated and no problems were identified.

29

- 30 Quantitation
- Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- rejected 'R.'

#### 4.6 PCBs by SW-846-8082

- 2 Overall, the data are of good quality and are usable as reported by the laboratory with the
- 3 exceptions noted below. Data were reviewed for the following:

45 Holding Times

6 Technical holding time criteria were met for all project samples.

7

1

- 8 <u>Initial and Continuing Calibration</u>
- 9 All initial and continuing calibrations associated with the project samples met QC criteria.

10

- 11 Blanks
- 12 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

14

- 15 Surrogate Recoveries
- All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

17

- 18 <u>Matrix Spike/Matrix Spike Duplicate</u>
- 19 MS/MSD analysis was performed for the project samples and all QC criteria were met.

20

- 21 Laboratory Control Sample
- 22 LCS was performed for the project samples and all QC criteria were met.

23

- 24 Field Duplicates
- Original and FD results were evaluated and no problems were identified.

26

- 27 Quantitation
- 28 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 29 estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- rejected 'R'. It should be noted that Aroclor 1242 results for samples DD0007, DD0008, and
- 32 DD0010, were estimated (qualified 'J'), due to altered pattern.

## 4.7 Herbicides by SW-846-8151

- 2 Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 3 reviewed for the following:

4

- 5 Holding Times
- 6 Technical holding time criteria were met for all project samples.

7

1

- 8 Initial and Continuing Calibration
- 9 All initial and continuing calibrations associated with the project samples met QC criteria.

10

- 11 Blanks
- 12 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

14

- 15 Surrogate Recoveries
- All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

17

- 18 Matrix Spike/Matrix Spike Duplicate
- 19 MS/MSD analysis was performed for the project samples and all QC criteria were met.

20

- 21 Laboratory Control Sample
- LCS was performed for the project samples and all QC criteria were met.

23

- 24 Field Duplicates
- Original and FD results were evaluated and no problems were identified.

26

- 27 Quantitation
- 28 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 29 estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 31 rejected 'R'.

32 33

## 4.8 Nitroaromatics and Nitramines by SW-846-8330

- Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 35 reviewed for the following:

1 2 **Holding Times** 3 Technical holding time criteria were met for all project samples. 4 **Initial and Continuing Calibration** 5 6 All initial and continuing calibrations associated with the project samples met QC criteria. 7 8 **Blanks** The 5X rule for contaminants found in the associated equipment rinse and method blanks was 9 applied to all sample results. All were found to be acceptable. 10 11 Surrogate Recoveries 12 All surrogate recoveries are within acceptable OC ranges for the surrogates applied. 13 14 Matrix Spike / Matrix Spike Duplicate 15 MS/MSD analysis was performed for the project samples and all QC criteria were met. 16 17 **Laboratory Control Sample** 18 LCS was performed for the project samples and all QC criteria were met. 19 20 Field Duplicates 21 Original and FD results were evaluated and no problems were identified. 22 23 Quantitation

- Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as 25
- estimated 'J' unless blank contamination was present or the results were rejected. Results 26
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as 27
- rejected 'R'. 28

#### **Validation Qualifiers**

- U Not detected. The compound/analyte was analyzed for, but not detected above the associated reporting limit.
- J The compound/analyte was positively identified; the reported value is the estimated concentration of the constituent detected in the sample analyzed.
- B The concentration reported was detected significantly above the levels reported in the associated equipment rinse samples and/or laboratory method and trip blanks. (5X/10X Rule was applied).
- R The reported sample results are rejected due to the following:
  - 1. Severe deficiencies in the supporting quality control data.
  - 2. Anomalies noted in the sampling and/or analysis process which could affect the validity of the reported data.
  - 3. The presence or absence of the constituent cannot be verified based on the data provided.
  - 4. To indicate not to use a particular result in the event of a reanalysis.
- UJ The compound/analyte was analyzed for, but not detected above the established reporting limit. However, review and evaluation of supporting QC data and/or sampling and analysis process have indicated that the 'non-detect' maybe inaccurate or imprecise. The non-detect result should be estimated.

### **Validation Reason Code Definitions**

(Page 1 of 2)

| Reason Code | Description   |
|-------------|---|
| 01          | Sample received outside of 4+/-2 degrees Celsius            |
| 01A         | Improper sample preservation                                |
| 02          | Holding Time Exceeded                                       |

## Data Validation Summary Report for the Site Investigation Performed at the Stump Dump Fill Area (Parcel FA-82) Fort McClellan, Calhoun County, Alabama

6

1 2

3

4

7 8

9

10

11

#### 1.0 Introduction

Level III data validation was performed on 100 percent of the environmental samples collected at Parcel FA-82. The analytical data consisted of one sample delivery group (SDG), CK928001, which was analyzed by Quanterra Incorporated. The chemical parameters for which the samples were analyzed are identified below:

12

| Parameter (Method)                                     |
|--|
| Volatile Organic Compounds by SW-846-8260B             |
| Semivolatile Organic Compounds by SW-846-8270C         |
| Target Analyte List Metals by SW-846-6010B/7470A/7471A |
| Organochlorine Pesticides by SW-846-8081A              |
| Organophosphorus Pesticides by SW-8141A                |
| Polychlorinated Biphenyls by SW-846-8082               |
| Chlorinated Herbicides by SW-846-8151A                 |
| Nitroaromatics and Nitramines by SW-846-8330           |

#### 2.0 Procedure

The sample data were validated following the logic identified in the 1994 U.S. Environmental Protection Agency (EPA) Contract Laboratory Program National Functional Guidelines For Inorganic Data Review and the 1999 EPA Contract Laboratory Program National Functional Guidelines For Organic Review for all areas except blanks. The EPA 1993 Region III Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses and 1992 Region III National Functional Guidelines for Organic Data Review were applied to the areas associated with blank contamination. Specific quality control (OC) criteria, as identified in the quality assurance plan (QAP), analytical methods, and laboratory standard operating procedures (SOP) were applied to all sample results. As the result of the use of Update III SW-846 test methods for the analytical data and the application of the Contract Laboratory Program (CLP) guidelines during the validation process, there were instances where specific QC requirements for all target compounds were not defined. This primarily occurred in the organic, gas chromatography (GC) and GC/mass spectrometry calibration areas and is due to the fact that the analytical methods are "performance-based," and allows the use of average calibration responses in lieu of individual responses, which are defined by CLP protocol. In light of applying CLP guidelines to SW-846 methods and evaluating the usability of the data during the validation

- 1 process, specific QC criteria were determined to address all target compounds and are identified
- 2 in this report for each parameter, as well as in the validation checklists, which function as
- 3 worksheets. All completed validation checklists are on file in the Knoxville office. For those
- 4 analytical methods not addressed by the CLP and Region III guidelines, the validation was based
- on the method requirements (i. e., SW-846, Code of Federal Regulations, SOP) and technical
- 6 judgment, following the logic of the CLP validation guidelines.

## 3.0 Summary of Data Validation Findings

- 9 The overall quality of the data was determined to be acceptable. The only rejected data ('R'
- qualified) was due to "poor performing" volatile compounds (ketones, some halogenated
- hydrocarbons, e.g.), which exhibited poor calibration responses in the associated calibration data,
- and samples that were reanalyzed and have more than one result reported. The 'R' qualifier was
- assigned to the samples with more than one set of results to indicate that a given result should not
- be used to characterize a particular constituent or an analysis for a given sample.

15

- 16 This validation report has been prepared for all the samples associated with this investigation,
- and the overall results of the validation findings are summarized in this report. A listing of the
- validation qualifiers and the reason codes, along with their definitions, is also found in
- 19 Attachment A. These qualifiers and reason codes were applied to the data and stored in the
- 20 FTMC database. The following section highlights the key findings of the data validation for
- 21 each analysis.

22

### 4.0 Analysis-Specific Data Validation Summaries

2425

23

### 4.1 Volatile Organic Compounds by SW-846-8260B

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 27 exceptions noted below. Data were reviewed for the following:

28

- 29 Holding Times
- 30 Technical holding time criteria were met for all project samples.

31

- 32 Initial and Continuing Calibration
- All initial and continuing calibrations associated with the project samples met QC criteria, with
- the exception of the following:

The following demonstrated RRFs below 0.1 in the ICAL and/or CCAL: nondetect results were rejected (qualified 'R'). Positive results were estimated (qualified 'J') unless 'B' qualified due to blank contamination.

| SDG     | Sample Number  | Compound     | Validation |
|---------|----------------|--------------|------------|
| Number  |                |              | Qualifier  |
| CK98200 | DD0025, DD0026 | Bromomethane | R          |
| 1       |                |              |            |

'R' qualifiers take precedence over estimating qualifiers.

The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: nondetect results were estimated (qualified 'UJ') unless rejected (qualified 'R') due to ICAL/CCAL minimum relative response factor (RRF) criteria not met. Positive results were estimated (qualified 'J') unless 'B' qualified due to blank contamination.

| SDG     | Sample Number  | Compound                              | Validation |
|---------|----------------|---------------------------------------|------------|
| Number  |                |                                       | Qualifier  |
| CK98200 | DD0025, DD0026 | Bromomethane, 2-Hexanone, 2-Butanone, | B/J/UJ/R   |
| 1       |                | Acetone, Methylene Chloride           |            |

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, takes precedence over estimating qualifiers, assigned due to quantitation.

'R' qualifiers take precedence over estimating qualifiers.

**Blanks** 

The 5X/10X rule for contaminants found in the associated equipment rinses, trip, and method 

blanks was applied to all sample results. All were found to be acceptable, with the exception of 

the following:

| SDG     | Sample Number  | Compound           | Blank Contaminant | Validation |
|---------|----------------|--------------------|-------------------|------------|
| Number  |                |                    |                   | Qualifier  |
| CK98200 | DD0025, DD0026 | Methylene chloride | Method/ER         | В          |
| 1       |                |                    |                   |            |

Surrogate Recoveries

All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

- 1 Matrix Spike/Matrix Spike Duplicate
- 2 Matrix spike/matrix spike duplicate (MS/MSD) analysis was performed for the project samples
- 3 and all QC criteria were met.

- 5 Laboratory Control Sample
- 6 Laboratory Control Sample (LCS) was performed for the project samples and all QC criteria
- 7 were met.

8

- 9 Internal Standards
- 10 All internal standards met QC criteria.

11

- 12 Field Duplicates
- Original and field duplicate (FD) results were evaluated and no problems were identified.

14

- 15 Quantitation
- Results quantified between the maximum detection limit (MDL) and the reporting limit (RL),
- which the lab qualified as 'J,' were qualified as estimated 'J' unless blank contamination was
- present or the results were rejected. Results rejected in favor of a preferred result (e.g., due to
- dilution or reanalysis) were qualified as rejected 'R'.

20

21

## 4.2 Semivolatile Organic Compounds by SW-846-8270C

- Overall, the data are of good quality and are usable as reported by the laboratory with the
- 23 exceptions noted below. Data were reviewed for the following:

24

- 25 Holding Times
- 26 Technical holding time criteria were met for all project samples.

27

- 28 Initial and Continuing Calibration
- 29 All initial and continuing calibrations associated with the project samples met QC criteria, with
- 30 the exception of the following:

31

- The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: nondetect results
- were estimated (qualified 'UJ') unless rejected (qualified 'R') due to ICAL/CCAL minimum
- RRF criteria not met. Positive results were estimated (qualified 'J') unless 'B' qualified due to
- 35 blank contamination.

| SDG     | Sample Number  | Compound          | Validation |
|---------|----------------|-------------------|------------|
| Number  |                |                   | Qualifier  |
| CK98200 | DD0025, DD0026 | 2,4-Dinitrophenol | UJ         |
| 1       |                |                   |            |

#### 2 Blanks

- 3 The 5X/10X rule for contaminants found in the associated equipment rinses and method blanks
- 4 was applied to all sample results. All were found to be acceptable, with the exception of the
- 5 following:

6

| SDG     | Sample Number  | Compound             | Blank Contaminant | Validation |
|---------|----------------|----------------------|-------------------|------------|
| Number  |                |                      |                   | Qualifier  |
| CK98200 | DD0025, DD0026 | bis(2-               | Method            | В          |
| 1       |                | Ethylhexyl)phthalate |                   |            |

7 8

#### Surrogate Recoveries

9 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

10

## 11 Matrix Spike/Matrix Spike Duplicate

MS/MSD analysis was performed for the project samples and all QC criteria were met.

13

### 14 Laboratory Control Sample

LCS was performed for the project samples and all QC criteria were met.

16

#### 17 Internal Standards

18 All internal standards met QC criteria.

19 20

#### Field Duplicates

Original and FD results were evaluated and no problems were identified.

2223

## Quantitation

- 24 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 27 rejected 'R'.

### 1 4.3 Metals by SW-846-6010B/7471A/7470A

- 2 Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 3 reviewed for the following:

5 Holding Times

4

7

10

14

17

20

23

26

29

33

6 Technical holding time criteria were met for all samples.

8 Initial and Continuing Calibrations

9 All initial and continuing calibrations associated with the project samples met QC criteria.

11 Blanks

- 12 The 5X rule for contaminants found in the associated equipment rinse, calibration, and method
- blanks was applied to all sample results. All were found to be acceptable.

15 Matrix Spike/Matrix Spike Duplicate

MS/MSD analysis was performed for the project samples and all QC criteria were met.

18 <u>Laboratory Control Sample</u>

19 LCS was performed for the project samples and all QC criteria were met.

21 <u>Interference Check Sample</u>

22 All ICS percent recoveries were acceptable. All QC criteria were met.

24 <u>Inductively Coupled Plasma Serial Dilutions</u>

25 All QC criteria were met for the serial dilutions associated with the project samples.

27 Field Duplicates

Original and FD results were evaluated and all QC criteria were met.

30 Quantitation

- Results quantitated between the instrument detection limit (IDL) and the RL ('B' flagged by the
- 32 laboratory) were qualified as estimated ('J').

34 4.4 Organochlorine Pesticides by SW-846-8081A

- Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 36 reviewed for the following:

1 **Holding Times** 2 3 Technical holding time criteria were met for all project samples. 4 5 **Initial and Continuing Calibration** All initial and continuing calibrations associated with the project samples met OC criteria. 6 7 8 **Blanks** 9 The 5X rule for contaminants found in the associated equipment rinse and method blanks was 10 applied to all sample results. All were found to be acceptable. 11 Surrogate Recoveries 12 All surrogate recoveries are within acceptable QC ranges for the surrogates applied. 13 14 Matrix Spike/Matrix Spike Duplicate 15 MS/MSD analysis was performed for the project samples and all QC criteria were met. 16 17 18 Laboratory Control Sample LCS was performed for the project samples and all QC criteria were met. 19 20 21 Field Duplicates 22 Original and FD results were evaluated and no problems were identified. 23 24 Quantitation 25 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as estimated 'J' unless blank contamination was present or the results were rejected. Results 26 27 rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as 28 rejected 'R'. 29 4.5 Organophosphorus Pesticides by SW-846-8141A 30 Overall, the data are of good quality and are usable as reported by the laboratory. Data were 31 32 reviewed for the following:

34 Holding Times

35 Technical holding time criteria were met for all project samples.

36

- 1 Initial and Continuing Calibration
- 2 All initial and continuing calibrations associated with the project samples met QC criteria.

34 Blanks

- 5 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- 6 applied to all sample results. All were found to be acceptable.

7

- 8 Surrogate Recoveries
- 9 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

10

- 11 Matrix Spike/Matrix Spike Duplicate
- MS/MSD analysis was performed for the project samples and all QC criteria were met.

13

- 14 <u>Laboratory Control Sample</u>
- LCS was performed for the project samples and all QC criteria were met.

16

- 17 Field Duplicates
- Original and FD results were evaluated and no problems were identified.

19

- 20 Quantitation
- 21 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 24 rejected 'R'.

25

4.6 PCBs by SW-846-8082

26 27

- Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 29 reviewed for the following:

30

- 31 Holding Times
- 32 Technical holding time criteria were met for all project samples.

33

- 34 <u>Initial and Continuing Calibration</u>
- 35 All initial and continuing calibrations associated with the project samples met QC criteria.

- 1 Blanks
- 2 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- 3 applied to all sample results. All were found to be acceptable.

- 5 Surrogate Recoveries
- 6 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

7

- 8 Matrix Spike/Matrix Spike Duplicate
- 9 MS/MSD analysis was performed for the project samples and all QC criteria were met.

10

- 11 <u>Laboratory Control Sample</u>
- 12 LCS was performed for the project samples and all QC criteria were met.

13

- 14 Field Duplicates
- Original and FD results were evaluated and no problems were identified.

16

- 17 Quantitation
- 18 Results quantified between the MDL and the RL, which the lab qualified as 'J,' were qualified as
- 19 estimated 'J' unless blank contamination was present or the results were rejected. Results
- 20 rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 21 rejected 'R'.

22

23

- 4.7 Herbicides by SW-846-8151
- Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 25 reviewed for the following:

26

- 27 <u>Holding Times</u>
- 28 Technical holding time criteria were met for all project samples.

29

- 30 <u>Initial and Continuing Calibration</u>
- 31 All initial and continuing calibrations associated with the project samples met QC criteria.

32

- 33 Blanks
- 34 The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

- 1 Surrogate Recoveries
- 2 All surrogate recoveries are within acceptable QC ranges for the surrogates applied.

3

- 4 Matrix Spike/Matrix Spike Duplicate
- 5 MS/MSD analysis was performed for the project samples and all OC criteria were met.

6

- 7 Laboratory Control Sample
- 8 LCS was performed for the project samples and all QC criteria were met.

9

- 10 Field Duplicates
- Original and FD results were evaluated and no problems were identified.

12

- 13 Quantitation
- 14 Results quantified between the MDL and the RL, which the lab qualified as 'J' were qualified as
- estimated 'J' unless blank contamination was present or the results were rejected. Results
- rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as
- 17 rejected 'R'.

18 19

- 4.8 Nitroaromatics and Nitramines by SW-846-8330
- Overall, the data are of good quality and are usable as reported by the laboratory. Data were
- 21 reviewed for the following:

22

- 23 <u>Holding Times</u>
- 24 Technical holding time criteria were met for all project samples.

25

- 26 <u>Initial and Continuing Calibration</u>
- 27 All initial and continuing calibrations associated with the project samples met QC criteria.

28

- 29 Blanks
- The 5X rule for contaminants found in the associated equipment rinse and method blanks was
- applied to all sample results. All were found to be acceptable.

32

|  |  |  |  |        |

#### Validation Qualifiers

- U Not detected. The compound/analyte was analyzed for, but not detected above the associated reporting limit.
- J The compound/analyte was positively identified; the reported value is the estimated concentration of the constituent detected in the sample analyzed.
- B The concentration reported was detected significantly above the levels reported in the associated equipment rinse samples and/or laboratory method and trip blanks. (5X/10X Rule was applied).
- R The reported sample results are rejected due to the following:
  - 1. Severe deficiencies in the supporting quality control data.
  - 2. Anomalies noted in the sampling and/or analysis process which could affect the validity of the reported data.
  - 3. The presence or absence of the constituent cannot be verified based on the data provided.
  - 4. To indicate not to use a particular result in the event of a reanalysis.
- UJ The compound/analyte was analyzed for, but not detected above the established reporting limit. However, review and evaluation of supporting QC data and/or sampling and analysis process have indicated that the 'non-detect' maybe inaccurate or imprecise. The non-detect result should be estimated.

### **Validation Reason Code Definitions**

(Page 1 of 2)

| Reason Code | Description   |
|-------------|---|
| 01          | Sample received outside of 4+/-2 degrees Celsius            |
| 01A         | Improper sample preservation                                |
| 02          | Holding Time Exceeded                                       |

## Data Validation Summary Report for the Site Investigation Performed at the Stump Dump (Parcel FTA-82) Fort McClellan, Calhoun County, Alabama

4 5 6

9

1

2

3

#### 1.0 introduction

Level III data validation was performed on 100 percent of the environmental samples collected at Parcel FTA-82. The analytical data consisted of nine sample delivery groups (SDG), PK68201.

PK68202, PK68203, PK68204, PK68205, PK68206, PK68207, PK68208 and PK68209, which

were analyzed by Quanterra Incorporated. In addition, an evaluation of the field split (FS) data,

which was analyzed by the U.S. Army Corps of Engineers-South Atlantic Division laboratory is

included in this report. The chemical parameters for which the samples were analyzed are

identified below:

14

12

13

|   | Parameter (Method)  |
|---|---|
| ( | Target Compound List Volatile Organics by Gas<br>Chromatography/Mass Spectometry SW-846-8260B |
|   | TCL Semivolatiles by GC SW-846-8270C  |
|   | Metals by SW-846-6010B and 7471A/7470A  |
|   | Pesticides by SW-846-8081A  |
|   | Organophosphorous Pesticides by SW-846-8141A  |
|   | Herbicides by SW-346-8151A  |
|   | Wet Chemistry   |

15 16

#### 2.0 Procedures

- 17 The sample data were validated following the logic identified in the 1994 EPA Contract
- 18 Laboratory Program National Functional Guidelines For Inorganic Data Review and the 1994
- 19 EPA Contract Laboratory Program National Functional Guidelines For Organic Review for all
- 20 areas except blanks. Region III Laboratory Data Validation Functional Guidelines for
- 21 Evaluating Inorganic Analyses (April 1993) and Region III National Functional Guidelines for
- 22 Organic Data Review (June 1992) were applied to the areas associated with blank contamination.
- 23 Specific quality control (QC) criteria, as identified in the quality assurance plan (OAP),
- 24 analytical methods, and laboratory standard operating procedures (SOP) were applied to all
- sample results. As the result of the use of Update III SW-846 test methods for the analytical data

- and the application of the CLP guidelines during the validation process, there were instances
- where specific QC requirements for all target compounds were not defined. This primarily
- occurred in the organic, Gas Chromatography (GC) and GC/Mass Spectrometry calibration areas
- 4 and is due to the fact that the analytical methods are "performance-based", and allows the use of
- 5 average calibration responses in lieu of individual responses, which are defined by CLP protocol.
- 6 In light of applying CLP guidelines to SW-846 methods and evaluating the usability of the data
- 7 during the validation process, specific QC criteria were determined to address all target
- 8 compounds and are identified in this report for each parameter, as well as, in the validation
- 9 checklists, which function as worksheets. All completed validation checklists are on file in the
- 10 Knoxville office. For those analytical methods not addressed by the CLP and Region III
- guidelines, the validation was based on the method requirements (i. e. SW-846, CFR, SOPs) and
- technical judgement following the logic of the CLP validation guidelines.

#### 3.0 Summary of Data Validation Findings

- 15 The overall quality of the data was determined to be acceptable. The only rejected data ('R'
- qualified) was due to "poor performing" volatile compounds (ketones, some halogenated
- 17 hydrocarbons, e.g.) and various chlorinated pesticide compounds, which exhibited poor
- calibration responses in the associated calibration data, herbicide results due to grossly missed
- hold-times, and samples that were reanalyzed and have more than one result reported. The 'R'
- 20 qualifier was assigned to the samples with more than one set of results to indicate that a given
- 21 result should not be used to characterize a particular constituent or an analysis for a given
- sample.

13

14

- 24 This validation report has been prepared for all the samples associated with this investigation and
- 25 the overall results of the validation findings are summarized in this report. A listing of the
- validation qualifiers and the reason codes, along with their definitions is also found in
- 27 Attachment A. These qualifiers and reason codes were applied to the data and stored in the
- 28 FTMC database. The following section highlights the key findings of the data validations for
- 29 each analysis.

30

### 4.0 Analysis-Specific Data Validation Summaries

1 2

3

# 4.1 Volatile Organics by GC/Mass Spectrometry SW-846-8260B

- 4 Overall, the data are of good quality and are usable as reported by the laboratory with the
- 5 exceptions noted below. Data were reviewed for the following:

6 7

### **Holding Times**

8 Technical holding time criteria were met for all samples.

9 10

#### **Initial and Continuing Calibration**

- All initial and continuing calibrations associated with the project samples met QC criteria, with
- 12 the exceptions of the following:

13 14

• The following demonstrated RRFs below 0.1 in the ICAL and/or CCAL: nondetect results were rejected (qualified 'R'); positive results were estimated (qualified 'J'); unless 'B' qualified due to blank contamination.

16 17

| SDG     | Samples Affected  | Analyte/Analytes  | Validation<br>Qualifier |
|---------|---|---|-------------------------|
| PK68201 | FX0001, FX0002, FX0003,<br>FX0004, FX0009, FX0010,<br>FX0011, FX0021, FX0022,<br>FX0023, FX0024, FX0025 | Bromomethane, Acetone, 2-Butanone   | J/R/B*                  |

| PK68209 | FX0026   | Acetone, 2-Butanone  | R                       |

- \* 'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers, assigned due to quantitation.
- The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20: nondetect results were estimated (qualified 'UJ'); unless rejected (qualified 'R') due to ICAL/CCAL minimum RRF criteria not met; positive results were estimated (qualified 'J'); unless 'B' qualified due to blank contamination.

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers, assigned due to quantitation.

\*\* 'R' qualifiers take precedence over estimating qualifiers.

### 6 Blanks

7 The 5X/10X rule for contaminants found in the associated equipment rinses, trip blanks, and

8 method blanks was applied to all sample results. All were found to be acceptable with the

9 exception of the following:

10

11

1 2

3

4

5

Note: 'B' qualifiers were applied to all of the following sample results.

| SDG     | Samples Affected   | Analyte/Analytes                       | Associated Blank<br>Contamination |
|---------|--|--|-----------------------------------|
